

BUSINESS REQUIREMENT DOCUMENT

Project Name	<i>CYNDY'S SWEETTOOTH: Online Bakery Management Application</i>
Status	<i>V1.0</i>
Prepared by	<i>Jennifer Francis-Nkporwi</i>

1. Executive Summary

This document outlines the business requirements for the development of an online application for Cyndy's Sweettooth; a small bakery that currently relies on manual processes and basic spreadsheets to manage customer orders, inventory, and sales, resulting in inefficiencies, errors, and limited visibility into business performance.

The proposed application aims to digitize customer ordering and centralize inventory and sales management. This solution will improve operational efficiency, reduce waste, enhance customer experience, and support data-driven decision-making. The project demonstrates how a simple digital solution can address common challenges faced by small businesses and support sustainable growth.

2. Purpose of the Document

The purpose of this Business Requirements Document is to:

- Clearly define the business needs and expectations for the online application
- Serve as a reference point for stakeholders throughout the project lifecycle
- Provide a foundation for solution design, development, and testing
- Ensure alignment between business objectives and the proposed solution

3. Project Overview

The project involves the design and implementation of a web-based application that allows customers to place bakery orders online while enabling the bakery owner to manage products, inventory, and sales from a centralized system.

The application will replace manual and fragmented processes with a streamlined digital solution that improves accuracy, efficiency, and visibility into daily operations.

4. Business Objectives

- Increase overall bakery sales by at least 15% within six months of application launch

- Reduce inventory waste by 20% within six months through improved tracking and planning
- Reduce order-related errors by 30% within three months of deployment
- Reduce time spent on manual record keeping by 40% within three months
- Provide real-time visibility into sales and inventory performance to support better decision-making
- Improve customer convenience and satisfaction through online ordering

5. Scope

In Scope

- Online customer ordering functionality
- Product catalogue management
- Order management and order status tracking
- Inventory tracking for bakery items and ingredients
- Daily and monthly sales reporting
- Basic user roles (Admin/Owner and Staff)
- Customer order confirmation notifications

Out of Scope

- Mobile native application (initial phase)
- Delivery logistics management
- Customer loyalty or reward programs
- Advanced analytics and forecasting

6. Key Stakeholders

Stakeholder	Role
Bakery Owner	Project sponsor and decision-maker
Bakery Staff	Operational users
Customers	End users of the ordering platform
Business Analyst	Requirements definition and documentation
App Developer	Solution design and implementation

Stakeholder	Role
Hosting / IT Support	System availability and maintenance

7. Business Requirements

7.1 Functional Requirements

Customer-Facing Requirements

- Customers shall be able to view available bakery products online
- Customers shall be able to place orders through the application
- Customers shall receive order confirmation after placing an order
- Customers shall be able to view order status

Bakery Owner / Admin Requirements

- The system shall allow the owner to add, update, and remove products
- The system shall track daily sales automatically
- The system shall generate basic sales reports (daily, weekly, monthly)
- The system shall allow the owner to monitor inventory levels
- The system shall notify the owner of low-stock items

Staff Requirements

- Staff shall be able to view incoming orders
- Staff shall be able to update order status (e.g. in progress, completed)

7.2 Non-Functional Requirements

- The system shall be accessible via a web browser
- The application shall load pages within 3 seconds under normal usage
- The system shall be available at least 99% of business operating hours
- User data shall be securely stored and protected
- The system shall be easy to use for non-technical users
- The application shall support basic scalability for increased users

8. Assumptions and Constraints

Assumptions

- Users have access to a smartphone or computer with internet connectivity
- Bakery staff have basic digital literacy
- The bakery operates from a single location

Constraints

- Limited budget suitable for a small business
- Short implementation timeline (approximately 9 weeks)
- Dependence on stable internet connectivity

9. Business rules:

BR-01: Payment Requirement

All customer orders must be successfully paid before the system generates an Order ID and sends the order for preparation.

BR-02: Order Validation

The system must validate that all required order details (selected items, quantity, delivery information) are completed before allowing checkout.

BR-03: Inventory Deduction

The system must automatically deduct ingredient quantities from inventory immediately after a successful payment confirmation.

BR-04: Low Stock Alert

The system must trigger a low-stock notification to the bakery owner when any ingredient falls below the predefined reorder threshold.

BR-05: Order Processing Trigger

Bakery staff must only receive and process orders that have a confirmed payment status.

BR-06: Order Status Update

Bakery staff must update the order status (e.g., “Preparing”, “Ready”, “Dispatched”) in the system to reflect real-time progress.

BR-07: Sales Recording

The system must automatically record every successful transaction and update the sales dashboard in real-time.

BR-08: Payment Failure Handling

If payment fails, the system must not create an order record and must notify the customer to retry payment.

10. User Adoption and Engagement

To encourage adoption:

- The application will have a simple and intuitive user interface
- Staff will receive basic training during deployment
- Customers will be informed of the app through in-store communication
- The system will minimize steps required to place an order

11. Usability and Trust

- The application will use clear navigation and readable content
- Order confirmations will reassure customers that requests were received
- Accurate order tracking will build trust with customers
- Secure handling of customer information will be ensured
- System reliability will be prioritized to maintain confidence

12. Business Growth

The application will serve as a scalable foundation for future enhancements such as:

- Delivery management
- Promotional campaigns and discounts
- Customer loyalty programs
- Expanded reporting and analytics

13. Approval and Sign-Off

Name	Role	Signature	Date
Bakery Owner	Project Sponsor	_____	_____
Business Analyst	Documentation Owner	_____	_____
App Developer	Solution Owner	_____	_____
